About this module

How can the logo be changed at the Jamf Connect login screen? What are the requirements to deploy a custom installer package during automated MDM enrollment?

All of these questions and more are covered within this module!

Estimated module completion time: 35 minutes

Module components

Video

Summary

- Jamf Connect allows users to login with and sync their credentials from an identity provider (IdP).
- Three components are required for Jamf Connect:
  - The Jamf Connect apps
  - A configuration profile containing the license key
  - Property lists used to configure Jamf Connect
- The Jamf Connect apps can be downloaded from Jamf Nation.
  - Jamf Connect Sync supports Okta.
  - Jamf Connect Verify supports Azure.
  - Jamf Connect Login can be used with any supported IdP.
- The configuration profile and property lists are contained in an email from Jamf.
- Once everything is in place, proceed with deployment.
